

# Welding Clothing

## Clothing and Workwear

Whatever your welding clothing requirements, ESAB can offer you a high performance range of welding garments suitable for any welding environment. With a great choice of traditional leather or high specification, Phoenix FR<sup>®</sup> inherently flame retardant fabrics, ESAB's product experts have developed a superior range of multi-risk garments to meet the demands of the welder.

### New Phoenix FR<sup>®</sup>

ESAB is proud to introduce the very latest technology in inherent flame retardant garments. In many industries workers face a complex mix of safety hazards, yet most protective fabrics protect from one or two hazards only. For this reason, employers in the past have been forced to compromise on safety. Not any more.

Phoenix FR<sup>®</sup> is proven to protect from flame, weld spatter, heat and electric arc explosion. Its' unique molecular structure means that the flame-resistant properties are inherent and therefore, permanent. This technology is the result of a four year development programme and ensures that all our Phoenix FR<sup>®</sup> range exceed the very latest ISO international standards.
